

Use case, user stories, kort status og acceptkriterier:

Customer

As a customer I want to be able to make my own bank account and store money.

I want a password for my bank account

So that its secure and safe.

Bank:

As a bank I am able to store money in the bank so customers are able to take money out of their account.

I want to be able to have the possibility of both send and receiving money.

So that the customers don't have to carry around all of their money.

Employee:

As an employee I want to be able to provide good customer service

I want the customers to feel safe and secure when having a bank account at our bank

So that they would want to come back again in the near future..

Kort status / User stories:

Til user stories implementeret vi bank, kunder og medarbejder, vi brugt AS, I want og so som kommer fra accept kriterier.

Vi har nået rigtig langt i opgaven til at prøve at færdiggøre alle funktionelle krav.

Reflektion:

Vi kunne godt finde ud af at bruge Git, men vi brugte rigtig meget code with me, så vi havde ikke rigtig brug for at bruge Git så meget udover at kloner projektet og vi kunne kode allesammen i et projekt.

Det var meget let at arbejde sammen.

Det vi ville gøre anderledes næste gang er at gøre mere brug af Git bash.
